FOR IMMEDIATE RELEASE

Mihta Askiy receives AUC power plant regulatory approval

(*Calgary, Alberta*) – Sovereign Digital Infrastructure Corp. (SDI) today announced Alberta Utilities Commission (AUC) approval to construct and operate the 650-megawatt (MW) Mihta Askiy Data Center Power Plant located on a previously permitted, cleared and partially constructed brownfield site about 40 kilometres northeast of Peace River, Alberta.

The Mihta Askiy Data Center Power Plant Project includes the natural gas-fired power plant approved by the AUC, and the co-located data centre, to be developed in two phases with construction starting in 2027.

“Mihta Askiy’s AUC power plant approval demonstrates that data centres can be advanced in Alberta on brownfield sites that deliver significant jobs, community benefits and public revenues,” said SDI CEO Tim Schneider.

“SDI is pleased with the AUC’s determination on the Mihta Askiy power plant and we look forward to advancing the project through Alberta’s Bring-Your-Own-Generation framework and to a final investment decision in early 2027.”

Mihta Askiy Datacenter Project Overview

- Located on a previously permitted, cleared and partially constructed brownfield site ~40 km northeast of Peace River, Alberta within the Carmon Creek industrial area
- Existing pipeline rights-of-way, no new roads
- 650MW natural gas-fired power plant, built in multiple phases with simple cycle operations planned in 2028 and combined cycle operations planned in 2029
- Closed-loop, direct-to-chip cooling recirculates coolant rather than consuming water
- Power plant previously approved under Alberta’s Environmental Protection and Enhancement Act with environmental field studies updated in 2025
- Economic and community benefits:
    - ~650 jobs at construction peak
    - ~200 operations and maintenance jobs starting extending across project life
    - Significant Data Centre Levy revenue to the Government of Alberta and property tax revenue to Northern Sunrise County across project life

- Community and Indigenous benefits to be further detailed in 2027 along with ongoing project design and engineering
